                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 3, Application US/08784512 Patent No. 5872209 GENERAL INFORMATION: APPLICANT: BARTNIK, Eckart APPLICANT: BIDENWIELLER, Bernd APPLICANT: BUSTINER, Prank

US-08-784-512-3

RESULT 14

```
TITLE OF INVESTION: GUIREDOC, Bruce
INTEL OF INVESTION: A satisficial recombinant substrate (LAGG 1)
ITILE OF INVESTION: Adaptement in call culture systems
CONSESSIONERS: Adaptement in call culture systems
CONSTRUCT: Natural Day Consenting Consessioners: Conserved C
```

```
APPLICANT: HUGHES, Clare
TITLE OF INVENTION: An artificial recombinant substrate (rAGG 1)
TITLE OF INVENTION: An artificial recombinant substrate (rAGG 1)
TITLE OF INVENTION: An artificial recombinant of study the proteolytic activity of TITLE OF INVENTION: "Aggrecanase" in cell culture systems

Publication No. US20060005571A1

GENERAL INFORMATION:

APPLICANT: Hoffmann-La Roche Inc.

TITLE OF INVENTION: Antibodies against insulin-like growth factor I receptor and use:

TITLE OF INVENTION: thereof

TITLE OF INVENTION: thereof

TITLE OF INVENTION: thereof

CURRENT PILING DATE: 2004-07-08

PRIOR PRILING DATE: 2004-07-08

PRIOR APPLICATION NUMBER: EP 03015526

PRIOR APPLICATION OF 3.2

RESULT 1 AAO19665 ID AAO1

New fusion molecules comprising polypeptide sequences that bind to IgG inhibitory receptor and native IgE receptor, useful for treating IgE-mediated hypersensitivity reactions, e.g. asthma or allergies, or autoimmune diseases. Human; IgG1; immunoglobulin G; immunotherapy; immune disease; Fcepsilon receptor; autoimmune disease; constant region; heavy chain; antiasthmatic; antiallergic; antialfammatory; dermatological; antiathritic; antirheumatic; antidiabetic; neuroprotective; Human IgG1 heavy chain constant region hinge-CH2-CH3 portion. 01-MAY-2002; 2002WO-US013527 01-MAY-2001; 2001US-00847208. 24-OCT-2001; 2001US-00000439. ä (first entry) (REGC ) UNIV CALIFORNIA. Zhang K, Zhu hinge-CH2-CH3 region WPI; 2003-103456/09. WO200288317-A2. 28-MAR-2003 Homo sapiens. 07-NOV-2002. AA019665; Saxon A, 

Claim 19; Fig 3; 116pp; English.

The present invention relates to a fusion molecule comprising a first polypoptide sequence capable of specific binding to a native IgG inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypoptide sequence capable of specific binding directly or indirectly to a native IgE receptor (FeepsilonR). Also provided are nucleotide sequences encoding such a

```

present invention relates to a fusion molecule comprising a first

```
polypeptide sequence capable of specific binding to a native IgG inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgE receptor (FrespionR). Also provided are nuclectide sequences encoding such a fusion protein. The fusion molecules and compositions are useful for treating an IgE-mediated biological response, prefrably an IgE-mediated hypersensitivity reaction, such as asthma, allegic rhinitis, atopic dermatitis, severe food allergies, chronic urticaria, angloedema or anaphylactic shock; or autoimmune diseases such as rheumatoid arthritis, crype-I diabetes mellitus, or multiple sclerosis, and for preventing of, or symptoms resulting from, a type I hypersensitivity reaction in a subject receiving immunotherapy. The present sequence is the human IgG1
                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                    158

```
polypeptide sequence capable of specific binding to a native Igg inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgE receptor (FcepailonR). Also provided are nuclectide sequences encoding such a cusion protein. The fusion molecules and compositions are useful for treating an IgE-mediated biological response, preferably an IgE-mediated hippersensitivity reaction, such as asthma, allergic rhinitis, atopic dermatities, severe food allergies, chronic uriticaria, angiosedema or anaphylactic shock; or autoimmune diseases such as rheumatoid arthrifis, type-I diabetes mellitus, or multiple sclerosis, and for preventing of, or symptoms resulting from, a type I hypersensitivity reaction in a consultation immunotherapy. The present sequence is a gammahinge-CHapamma2-(Gly4Ser)3-CHepsilon3-CHepsilon3-CHepsilon3 fusion consultation in the invention (designated GE2) of the invention

                                                                                                                                                                                          This invention relates to a novel MUC1 chimeric protein which comprises a first polypeptide sequence and a second polypeptide sequence, where the first polypeptide sequence is a MUC1 extracellular (MUC1-EC) polypeptide, and the second polypeptide sequence is a human immunoglobulin FC polypeptide or a human albumin polypeptide. The invention may be useful for the development of compounds with a cytostatic activity acting as MUC1 antagonists or CD227 antagonists. The MUC1 chimeric protein is useful in preparing a composition for treating cancer. The present sequence is that of a protein which was used during the development of the novel MUC1 chimeric protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180

the invention tradece to a mountained religions delected from cesidues 250, 314, and 428 (Kabat numbering) is different from that residues 250, 314, and 428 (Kabat numbering) is different from that comprising an PC residon protein. Also included are an FC fusion protein comprising an PC residon substantially identical to that of the corresponding unmodified FC-fusion protein.

Consisting of the corresponding unmodified FC-fusion protein a modified for residues 250, 314, and 428 is different from the propertion where at least one amino acid residue selected from the group consisting of residues 250, 314, and 428 is different from the present in the unmodified IgG class antibody), an isolated polynucleotide in the unmodified IgG class antibody), an isolated polynucleotide conjugation or polymetrial to a sequence selected from ADZ69600-ADZ69656, an isolated comprising an amino acid sequence at least 90% identical to a sequence selected from ADZ69600-ADZ69656, an isolated comprising at least one amino acid sequence at least 90% identical to binding affinity/serum half-life of an PC-fusion protein (comprising selecting at least one amino acid residue as cited above, and confirmed present in the PC-fusion protein) and a method for producing at modified PC-fusion protein) and a method of producing an entire present in the PC-fusion protein) and a method of producing an entirely for propertial properties of properties of producing an entirely for present in the PC-fusion protein) and a method of producing an entirely for properties of producing an entirely for properties of producing an entirely for protein protein with an altered binding affinity for present in the present with an altered binding affinity for properties of producing an entirely for protein protein when an altered binding affinity for present and protein which an altered binding affinity for properties of producing and protein protein when an altered binding affinity for properties of producing and protein protein protein form protein protein protein p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein (comprising preparing an expression vector comprising a suitable promoter operably linked to DNA encoding at least a constant region of an IgG heavy chain, transforming host cells with the vector and culturing the transformed host cells to produce the modified IgG Fc fusion protein). The modified antibody has a higher affinity for FcRn at pH 6.0 than at pH 8.0. The fusion proteins are useful for studying protein agents. The present sequence represents a human IgG1 heavy chain constant region with an amino acid substitution at residue 250, 314 or 428 (Rabat numbering, the actual residue that is mutated is covered in the feature
                                                                                                                                                                                                                                                                                          New modified Fc-fusion protein where at least one amino acid residue from the heavy chain constant region, useful for studying protein function in vitro and in vivo and as potential therapeutic and diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             invention relates to a modified Fc-fusion protein where at least one

A novel recombinant vector has been developed which comprises a nucleotide sequence encoding a fusion protein. The fusion protein comprises three domains joined together in order, from N-terminus to C-terminus, of a first domain comprising a protein of interest, a second domain comprising a hydrophilic spacer and an affinity domain, each domain comprising amino acid residues. The present sequence represents the hinge/Fr region of human IgG1, used in example 3 of the present invention. The recombinant vector is used for the production of authentic recombinant proteins of interest. The method of the invention is useful for the expression of fusion proteins capable of isolation by affinity of the order of the production of authentic proteins of interest the efficient cleavage and generation of authentic proteins of interest that do not contain extraneous (i.e. non-naturally occurring) amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant protein expression system for fusion protein production - useful for high quantity production of authentic recombinant proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 NWYVDGVEVHNVKTKPREEQYNSTYRVVSVLTVLHQNWMNGKEYKCKVSNKALPAPIEKT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence was used in the production of AGP-1 fusion proteins. AGP-1 is a type II transmembrane protein. The fusion proteins comprise an Pc immunoglobulin region fused to the N-terminal portion of the AGP-1 and protein. The fusion proteins can be used to induce apoptosis in a tissue, and to treat proliferative disorders, immune disorders, or virally-breast, prosites. The proliferative disorders include cancers, such as breast, prostate, lung or colon cancer. The viral infections include hepatitis, and acquired immunodeficiency syndrome (AIDS), and the immune disorders may be autoimmune disorders or transplant rejection. Cardiovascular diseases such as arteriosclerosis may also be treated. The AGP-1 containing fusion proteins have increased biological activity compared to the soluble AGP-1 proteins used in prior art therapies
                                                                                                                                                                                                                                                                                             Human; AGP-1; type II transmembrane protein; cytostatic; antiviral; antiinflammatory; hepatotropic; antiarteriosclerotic; anti-HIV; HIV; human immunodeficiency virus; apoptosis; proliferative disorder; cancer; hepatitis; acquired immunodeficiency syndrome; AIDS; autoimmune disorder; transplant rejection; cardiovascular disease; arteriosclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 NWYVDGVEVHNAKTKPREEQYNSTYRVVSVLTVLHQDWLNGKEYKCKVSNKALPAPIEKT 120

of lytic bone disease or multiple myeloma. Also the method can be used for preventing metastasis of cancer to bone or osteosclerotic bone metastasis. The method comprises administering an OPG (osteoprotegrin) polypoptide or OPG fusion protein. The OPG proteins (see AAB80898-AAB80905) can inhibit formation of osteoclasts (and thus bone resorption) by blocking differentiation from monocytes/macrophage precursors. The present sequence is the hinge. CH2 and CH3 regions of human 1g9gammal. This sequence can be used to generate fusion proteins of OPG and immunoglobulin, for use in the present invention. The generated fusion proteins can exhibit increased circulating half-lives and slower clearance times, thereby providing a more sustained activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method for the prevention or treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NWYVDGVEVHNVKTKPREEQYNSTYRVVSVLTVLHQNWMNGKEYKCKVSNKALPAPIEKT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses fusion protein comprising human osteoprotegerin (OPG) protein fused by linker to human 1961 Rc portion. OPG negatively regulates formation of osteoclasts in vitro and in vivo. It blocks the differentiation of osteoclasts from monocyte or macrophage precursors and the reabsorption of bone. The OPG-Fc fusion protein is administered for the reabsorption of bone. The OPG-Fc fusion protein is administered for osteomyelitis, hypercalcaemia, osteopenia associated with surgery or steroid administration, osteonecrosis, bone loss due to rheumatoid arthritis, periodontal bone loss, osteolytic metastasis and/or prosthetic lossening. The present sequence is partial human immunoglobulin G (1g G) locening. The present sequence is partial human immunoglobulin G (1g G) Hrotein comprising the hinge and heavy chain constant regions CH2 and CH3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

The invention relates to a method for increasing and maintaining content in a mammal. The method comprises administering a had all the process, and the invention in a mammal. The method comprises administering a composition, less frequently than an equivalent molar amount of and at a composition, less frequently than an equivalent molar amount of and at a lower molar amount than recombinant human Epo (rHuEpo) to obtain a comparable target haematocrif. Epo is a glycoprotein hormone necessary for the maturation of erythroid progenitor cells into erythrocytes. Human Epo comparable target haematocrif in a mammal suffering from anaemia associated with a decline or loss of kidney function, myelosuppressive therapy comprising chemotherapeutic or anti-viral drugs or associated with a present sequence is human immunoglobulin G (IgG) gamma 1 constant heavy chain (CH2) (CH3) hinge region used to construct Epo hyperglycosylated analogue fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

```
The invention relates to a compound comprising an immunoglobulin (Ig)
heavy chain constant region or its fragment that retains the ability to
bind an Fo receptor linked by a linker group or a direct bond to a
c peptide capable of binding an amyloidogenic protein. The invention is
useful for clearing an amyloidogenic protein The invention is
c useful for clearing an amyloidogenic protein The invention is
c useful for clearing an amyloidogenic protein such as beta-amyloid,
c transthyretin (TTR), prion protein (PPP), islet amyloid, polypeptide
c (TAPP), atrial natriuretic factor (AMP), kappa light chain, lambda light
c thain, amyloid A, procalcitonin, cystatin C, beta2-microglobulin, ApoA-I,
c (App), atrial natriuretic factor (AMP), kappa light chain, lambda light
c chain, amyloid A, procalcitonin, fibrinogen, Huntington, alpha-synuclein and
lysozyme from a subject and for tracting an amyloidogenic disorder such
as Alzheimer & disease and spongiform encephalopathy. Disorders treatable
amyloid cardiomyopathy), PPP (eg. spongiform encephalopathies, including
acrapie in sheep, bovine spongiform encephalopathy in cows and
creutzfeldt-Jacob disease (CJ) and Gerstmann-Straussler-Scheinker
syndrome (GSS) in humans), IAPP (eg. insulinoma, adult onset diabetes),
ANF (eg. isolated atrial amyloid), kappa or lambda light chain (eg.
c diopathic amyloidosis of Finnish type), Fibrinogen (eg. hereditary renal
amyloidosis), Lysozyme (eg. hereditary systemic amyloidosis), Gelsolin (eg.
c tammloidosis), Lysozyme (eg. hereditary systemic amyloidosis),
amyloidosis), Lysozyme (eg. hereditary systemic amyloidosis),
c used in the exemplification of the invention
                                                                                                                                                                                              Human, amyloidogenic protein, Alzheimer's disease, Huntington's disease, spongiform encephalopathy, familial amyloid cardiomyopathy; amyloidosis, Gerstmann-Straussler-Scheinker syndrome, spongiform encephalopathy, GSS; Creutzfeldt-Jacob disease, insulinoma, diabetes, body myocytis, myeloma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel therapeutic agent useful for treating an amyloidogenic disorder, e.g. Alzheimer's disease, comprises an immunoglobulin heavy chain constant region linked to a peptide capable of binding amyloidogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         97.2%; Score 1225; DB 5; Length 232; 97.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a compound (I) binding to tissue factor (TF).

The compound (I) has the formula A-(LM)-C, where A is a FVIIa polypeptide, LM is an optional linker group, C comprises an optional linker group, C comprises an modification of the manufacture of a medicament for linhibits TF-medicament, and for the manufacture of a medicament for preventing or treating disease or disorder associated with pathophysiological TF activity. The disease or disorder associated with pathophysiological TF activity are deep venous thrombosis, arterial thrombosis, post surgical thrombosis, coronary artery bypass graft (PAGG), percutaneous transdermal coronary angioplastry (PTGA), stroke, cancer, tumor metastasis, angiogenesis, ischemia/reperfusion, rheumatoid arthritis, thrombolysis, angiogenesis, ischemia/reperfusion, rheumatoid arthritis, thrombolysis, andiodericosis and restences following angioplastry, acute and chronic indications such as inflammation, septic shock, septicemia, hypotension, adult respiratory distress syndrome (ARDS), disseminated intravascular coagulopathy (DIC), pulmonary embolism, platelet deposition, myocardial infarction, or prophylactic treatment of mammals with atherosclerotic vessels at risk for thrombosis. The present sequence represente the Fc domain fragment of human immunoglobulin GI (19G1).

(HUEPD), a peptide linker, and a human IgG Fc variant, is new.

(HUEDD), a peptide linker, and a human IgG Fc variant, is new.

(HUEDD), a peptide linker and a human IgG Fc variant, is new.

(INDEDENDENT CLAIMS are also included for the following: a chinese hamster ovary (CHO)-derived cell line producing the HUEDO-L-vFc fusion procein in its growth medium in excess of 10 Emicro; per million cells in a 24 hour period; an entend for making a recombinant fusion protein comprising HUEDO, a flexbble peptide linker, and a human IgG Fc variant. Preferred Protein: The peptide linker containing 20 or fewer amino acids is present between HUEDO and the human IgG Fc variant, alanine, and threonine. The human IgG Fc variant, serine, alanine, and threonine. The human IgG Fc variant comprises a hinge, CH2, and CH3 domains of human IgG Variant comprises a hinge, CH2, and CH3 domains of human IgG Variant and Leucl35Ala mutations comprising 437 amino acids (SEQ ID NO. 18). It further comprises a hinge, CH2, and CH3 domains of human IgG I with Leucl34Aul, Leucl35Ala mutations comprising 437 amino acids (SEQ ID NO. 22). The HUEPO-L-VFC fusion protein exhibits in vitro biological activity similar to or higher than that of rHuEPO on a molar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New recombinant HuBPO-L-vFc fusion protein comprises human erythropoietin (HuBPO), a peptide linker, and a human IgG Fc variant, useful for treating chronic anemia due to renal diseases, cancer chemotherapy, or rheumatoid arthritis.

CC 30 & Amicro; gper million cells in a 24 hour period. The human IgG FC variant comprises a hinge, CH2, CH3 domains of human IgG FC variant comprises a hinge, CH2, CH3 domains of human IgG FC variant comprises a hinge, CH2, CH3 domains of human IgG FC variant comprises a hinge, CH2, CH3 domains of human IgG FC variant comprises a hinge, CH3, EG2 as SEQ ID NO. 18, and IgG4 as SEQ ID NO. 20, IgG2 as SEQ ID NO. 18, and IgG4 as SEQ ID NO. 20, IgG2 as SEQ ID NO. 18, and IgG4 as SEQ ID NO. 20, IgG2 as SEQ ID NO. 18, and IgG4 as SEQ ID NO. 20, IgG2 as SEQ ID NO. 18, and IgG4 as SEQ ID NO. 20, IgG2 as SEQ ID NO. 18, and IgG4 as SEQ ID NO. 20, IgG2 as SEQ ID NO. 18, and IgG4 as SEQ ID NO. 20, IgG2 as SEQ ID NO. 18, and IgG4 as SEQ ID NO. 20, IgG2 as SEQ ID NO. 18, and IgG4 as SEQ ID NO. 20, IgG2 as SEQ ID NO. 18, and IgG4 as Preferred Method: Making a recombinant CC that of rhuBPO on a molar basis. Preferred Method: Making a recombinant CC that of rhuBPO on a molar basis. Preferred Method: Making a recombinant CC cell line where the recombinant protein is expressed in its growth medium in excess of 10 & Amicro; gp er million cells in a 24 hour period; and CC protein exhibits in vitro biological activity similar to or higher than CC that of rhuBPO on a molar basis. Antianemic; Nephrotropic. No biological activity similar to or higher than ctravenous route. No dosage given. The recombinant HuBPO-L-vFc fusion protein is useful for treating patients with chronic anemia due to renal diseases, cancer chemocherapy, rheumatoid architists, AZT treatment for treatment of remain failure. A fusion protein was assembled from several DNA segments. To obtain the gene encoding the leader peptide and mature CC brotein of human erythropoletin (EPO), cDNA library of human erythropoletin served as the resulting DNA fragmen
   Preferred CHO-Derived Cell Line:

The polypeptide of the invention demonstrates immunosuppressive, cytostatic and antiinflammatory activities and is a spleen-expressed (SPEX) polypeptide. The methods and activities and is a spleen-expressed (SPEX) polypeptide. The methods and compositions of the present invention may useful for modulating liveluding autoimmunity, cancer, transplant rejection and inflammation. Such modulation may be achieved via the use of gene therapy. The current sequence is that of the human spleen-expressed (SPEX) receptor-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                121 ISKAKGQPREPQVYTLPPSRDELTKNQVSLTCLVKGFYPSDIAVEWESNGQPENNYKTTP 180
